Security+ certified Cybersecurity & Computer Information Technology graduate and M.S. Applied AI student with experience building production AI tools, SIEM dashboards, security automation projects, and full-stack SaaS applications. Currently an AI Development Intern supporting a production RAG-based identity theft triage chatbot and founder of Habla, an edtech SaaS used by teachers and students. Seeking full-time technical roles across cybersecurity, AI, SOC operations, IT, and security automation in Chicagoland.

EDUCATION

Purdue University Northwest — Hammond, IN

M.S. Applied Artificial Intelligence

Expected May 2027

Coursework: Applied Machine Learning, Cybersecurity & Machine Learning, Ethical AI, Research & Analysis

B.S. Cybersecurity & Computer Information Technology

May 2026

GPA: 3.71 | Dean's List / Semester Honors | CS Club, ROAR Cyber Club, SHPE

EXPERIENCE

AI Development Intern — American Identity Group

Jan. 2026 – Present

Python, Flask, Gemini API, RAG, SQLite

- Continued from a PNW industry-sponsored senior project into a paid AI development internship, working directly with leadership to maintain and improve a production identity theft triage chatbot.
- Built and shipped a RAG-based chatbot for identity theft triage using Flask, Gemini API integration, internal knowledge documents, structured response handling, and escalation logic.
- Implemented PII redaction, deterministic closeout behavior, SQLite-backed case documentation, admin ingestion, and automated evaluation/testing workflows with 66+ passing tests.
- Supported production readiness through QA, bug fixes, deployment support, and stakeholder communication.

Founder & Full-Stack Developer — Habla (tryhabla.com)

2024 – Present

Next.js, Turso, Upstash Redis, Vercel Blob, Google OAuth

- Founded and launched a production edtech SaaS for language teachers, reaching 366 users, 92 teacher accounts, 122 classes, 67 assignments, and 341 student submissions with zero paid acquisition.
- Built teacher/student role separation, Google OAuth, class creation, assignment publishing, student recording submissions, CSV gradebook export for PowerSchool, and admin analytics.
- Deployed production infrastructure with Next.js, Turso/libSQL, Upstash Redis, Vercel Blob, Vercel, daily cron cleanup, rate limiting, and health checks.

Cybersecurity Teaching Assistant — GenCyber Camp, PNW (NSA-Funded)

Summers 2024 & 2025

- Supported two five-day NSA-funded cybersecurity camps for students and educators covering ethical hacking, network security, cryptography, Raspberry Pi IoT labs, and forensics.
- Completed full curriculum independently before each camp; served as technical lead assistant.

PROJECTS

TriageAI — AI-Assisted SOC Dashboard

github.com/DavidGarcia355

Python, Flask, Wazuh, OpenSearch, Ollama (llama3.2), HTML/CSS/JS

- Built a local SOC dashboard connecting live Wazuh SIEM alerts to an Ollama LLM with zero external API calls, keeping triage data inside the local environment.
- Implemented OpenSearch alert ingestion, MITRE ATT&CK mapping, confidence scoring, source-IP correlation, animated risk gauge, and natural language threat queries.
- Generated structured Technical, Analyst, and Executive triage views per alert.

Azure Sentinel RDP Detection Lab

github.com/DavidGarcia355/azure-sentinel-rdp-detection-lab

Microsoft Sentinel, Azure, KQL, Log Analytics

- Built a SOC detection pipeline with Azure VM, Log Analytics, Windows Security Events ingestion, and a custom KQL rule to detect non-SYSTEM RDP logins with live incident verification.

Phishing Email Detection — ML Classifier

github.com/DavidGarcia355/phishing-email-detection-ml

Python, scikit-learn, TF-IDF

- Trained Logistic Regression on approximately 82K emails; achieved 98% classification accuracy with TF-IDF vectorization and feature engineering.

SKILLS

Cybersecurity: CompTIA Security+, Wazuh SIEM, Microsoft Sentinel, KQL, MITRE ATT&CK, log analysis, incident triage, Wireshark, Kali Linux, ethical hacking, network security, digital forensics, VirtualBox, Azure VM

AI & Automation: Python, RAG, LLM integration, Gemini API, Ollama, Whisper, prompt engineering, scikit-learn, TF-IDF, Flask

Development: Next.js, JavaScript, TypeScript, HTML, CSS, REST APIs, SQL, SQLite, Git, Vercel

Systems & Cloud: Azure, Google Cloud, Linux, Windows, OpenSearch, Turso, Upstash Redis, Vercel Blob
